SUMMARY

Full stack developer with a degree in Systems Analysis and Development and 1.5 years as a software development intern at IBM. I built and maintain FrogShare, a real-time screen streaming desktop app (Electron, WebRTC, native audio in C#); built the Analytics module of the LaneGG platform (React, Supabase, Riot API); and had a Microsoft Teams MCP server merged into deco's open source repository. From support and infrastructure, I bring a production mindset: monitoring, logs and incidents.

PROJECTS

FrogShare · screen streaming desktop app frogshare.onrender.com · GitHub

- Built an Electron app that streams games with the audio of a single process, captured by a native C# module (WASAPI process loopback).
- Implemented a GPU video pipeline with H.264 encoding via NVENC, AMF or QuickSync and frame pacing to avoid dropped frames while the game loads the GPU.
- Built the Node.js signaling server (Express, Socket.IO) and P2P WebRTC with fallback to Cloudflare TURN and SFU for large rooms.
- Automated distribution through GitHub Releases with SHA-512-verified auto-updates and kept dependencies free of known vulnerabilities (npm audit, Dependabot).

LaneGG · League of Legends coaching platform (team project) lanegg.com.br

- Built the Analytics module in React: player profile, match history, interactive match map with timeline, and performance comparison against Challenger players by lane and champion.
- Implemented a Deno/TypeScript Edge Function that consumes the Riot API with quota control, 24h caching and automated tests with fixtures.
- Evolved the PostgreSQL database (Supabase) with SQL migrations for rank, runes, items and lane matchups, shipping through reviewed pull requests.

Microsoft Teams MCP server · open source contribution (deco) github.com/decocms/mcps/pull/444

- Created a TypeScript MCP server with 34 tools on top of the Microsoft Graph API: channels, chats, meetings and a new-message trigger.
- Implemented OAuth 2.0 with PKCE, Graph change notifications and state in Cloudflare Workers KV; the PR was reviewed and merged into the official repository.

EXPERIENCE

Help Desk Supervisor — Globals Americana, Brazil | Aug 2025 – Apr 2026

- Led a team of 5 L1/L2 analysts in the banking sector; monitoring with Grafana and AWS logs.

IT Infrastructure Assistant — Goodbom Sumaré, Brazil | Aug 2024 – Aug 2025

- Supported retail ERP and POS across 3 sites, with L1/L2 support and user and IT asset administration.

Software Development Intern — IBM Hortolândia, Brazil | Jun 2022 – Dec 2023

- Built web applications with Python, Flask, AngularJS and TypeScript in an agile squad (Scrum/Kanban).
- Created and integrated REST APIs with GitHub version control and CI/CD pipelines, speeding up feature delivery.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, C#, SQL, HTML, CSS.
- **Front-end:** React, Vite, AngularJS, responsive interfaces, SEO.
- **Back-end & APIs:** Node.js, Express, Flask, Deno, Socket.IO, REST APIs, webhooks, OAuth 2.0, Microsoft Graph API, MCP.
- **Real-time & desktop:** Electron, WebRTC, TURN/SFU, native audio capture (WASAPI), GPU video encoding.
- **Data & cloud:** PostgreSQL, Supabase (RLS, Auth, Realtime, Edge Functions), AWS, Cloudflare Workers, Render, Vercel.
- **Tools & practices:** Git/GitHub, pull requests, CI/CD, automated tests, Grafana, Scrum, Kanban.

EDUCATION AND CERTIFICATIONS

Associate Degree in Systems Analysis and Development — Fatec Americana (P-TECH/IBM) | 2022 – 2023
Technical Degree in Systems Analysis and Development — Etec Polivalente de Americana | 2019 – 2021
Agile Explorer — Open P-TECH (IBM) | 2021
